Exhaust gas emissions from the maritime industry are subject to international and national laws and regulations. It is required for ship owners to establish compliance with new environmental requirements.

Exhaust gas emissions from ships are subject to constantly stricter international, national and local regulations defined by the International Maritime Organization (IMO). ShipCEMS is designed to prove the compliance with the limits set for airborne pollution in MARPOL Annex VI.

Inspired by environmental concerns, ShipCEMS is designed to monitor and report traces of $\text{SO}_2$, $\text{CO}_2$ and other gas substances that are contributing to local and global emission challenges. Our ShipCEMS is the clever choice for ship owners to assure that the forthcoming IMO regulations for emission control areas are met.

The ShipCEMS design is based on a careful selection of maritime standard components; hence ship movements, vibrations and temperature loadings are attended to during system design. Our solution uses a heated sample treatment throughout to assure measuring the true composition of the exhaust gas.

ShipCEMS can be customised to individual requirements, covering all types of exhaust cleaning systems and all ship fuels from heavy fuel oil to low sulphur fuel oil or LNG-fuelled ships.

- Continuous monitoring of $\text{SO}_2$ and $\text{CO}_2$
- $\text{NO}_x$ and Oxygen monitoring as options

- Extractive measuring technology for demanding applications
- Rugged design for marine environment and operations
- Continuous operation with automatic analyser calibration
- Low-cost maintenance, long service lifetime
- Measures on a dry basis (no need to measure moisture in exhaust gas).

A typical ShipCEMS installation comprises:
- Flange mounted sample probe
- Sample Conditioning System(s)
- Analyser Cabinet

ShipCEMS can monitor up to four streams simultaneously due to sample stream switching. One sample probe and one Sample Conditioning System must be installed for each exhaust funnel to be monitored. Only one Analyser Cabinet is required, taking care of the necessary stream switching.

**Technical specifications**

**Measuring range:**
- SO₂: Default 0-50 ppm
  Max 0-1000 ppm
- CO₂: Default 0-10%
  Max 0-15%
- NOx: on request
- O₂: on request
- CO: on request
- Other gases on request

**Air requirements:**
- Air quality according to:
  ISO 8573-1:2010 [1: 2: 1]
- Consumption: 15 l/min/funnel

**Analyser Cabinet:**
- Dimension: 800 x 400 x 1000 mm
- Weight: 143 kg

**Sample Conditioning System:**
- Dimension: 400 x 300 x 700 mm
- Weight: 52 kg

**Heated sample probe:**
- Length: 254 mm
- Flange diameter: DN-65 / PN6*
- Weight: 10 kg

**Ingress protection:**
- IP44

**Calibration gas (span) requirements:**
- 40 ppm SO₂
- 8 mol% CO₂
- Rest N₂
- Consumption: 5 l/calibration

**Materials:**
- Cabinets: SS316L
- Tubing: PFA/PTFE
- Fittings: SS316
- Sample probe counter flange: SS316L (Hastelloy is optional)

**Power requirements:**
- 230 / 110 VAC

**Power consumption:**
- Analyser Cabinet: 590 W
- Sample Conditioning System: 490 W
- Heated sample probe: 350 W
- Heated sample line: 67 W/m

**Communication:**
- 4-20 mA analogue outputs
- Digital alarm outputs
- Modbus - (optional)
- Profibus - (optional)
- * Others on request
